SEUNGJU SONG

Game Designer & Programmer

Redmond, WA | justju1616@gmail.com | GitHub | LinkedIn

EDUCATION

DigiPen Institute of Technology | **Redmond, WA** Expected Apr 2028

B.S. in Computer Science in Real-Time Interactive Simulation

Keimyung University | **Daegu, South Korea**

DigiPen Game Engineering Program

SKILLS

Languages: C++, C#, C

Game Engines & APIs: Unity, OpenGL, Raylib, Vulkan (Learning)

Tools & Workflow: Perforce (P4V), Git, Visual Studio, Jira, Notion

Core Competencies: Game & System Design, Level Balancing, Low-Level Programming (Win64, TCP/IP)

PROJECT EXPERIENCE

Poseidon Skate | *Game Designer & Programmer — PASSION DIFF* Sep 2026

- Designed and implemented enemy spawning, auto-targeting combat, and health/damage tracking for a hyper-casual skating shooter.
- Built the tornado trick reward system, replacing an unreliable single-impulse launch with a scripted spiral-ride animation and launch physics.
- Built the game's audio system from scratch, including a combo chime that rises in pitch with each successful trick streak.

Street Typer | *Game Designer & Programmer* Jul 2026 – Aug 2026

- Collaborated within a 3-person team to build and polish core gameplay mechanics and stage-specific gimmicks.
- Designed and balanced level progression to sustain a steady difficulty curve and keep players engaged.
- Programmed core game systems, including the battle manager, stage transitions, and multi-language support.
- Built the in-game card system and implemented visual transition effects and intro scenes.

Dragonic Tactics | *Game Designer & Artist* Sep 2025 – Jun 2026

- Designed core system mechanics, map layouts, and character concepts for a tactical game.
- Authored detailed AI flowcharts defining enemy behavior, decision-making, and combat patterns.

Dangling Game Jam: "Icicle Crush & Rush" | *Team Leader & Game Designer* Aug 2025

- Led a cross-functional team, managing the project timeline and aligning members with the core design vision.
- Authored the Game Design Document (GDD) and delivered the final pitch to audiences and judges.

Don't Stop the Party | *Solo Developer* Summer 2025

- Won 1st Place at the University Game Jam (1-week development cycle) with a hyper-casual game built in Raylib.
- Owned the entire production pipeline independently: game design, programming, art, and sound.

PROFESSIONAL EXPERIENCE

Teaching Assistant (GAM150) | **Keimyung University, Daegu, South Korea** Spring 2026

- Supported students in game project development, troubleshooting technical issues, and reinforcing core game engineering concepts.

Sergeant, Aircraft Armament Maintenance Specialist | **Republic of Korea Air Force, Wonju, South Korea** Aug 2022 – May 2024

- Maintained and inspected aircraft armament systems for the 8th Fighter Wing, applying strong attention to technical detail, discipline, and teamwork in high-pressure environments.
